Call on Aqua Azul for UV lamps, UV Sterilizers, and all of your water and wastewater applications. We specialize in installation, testing, and maintenance of UV Sterilizers worldwide. Aqua Azul was established in year 2000. Each of our technical managers has at least 25 years experience working with ultraviolet technology. We do our own start ups. Service both ours and others equipment. We also have replacement parts for most major ultraviolet equipments.

Aqua Azul Corporation is pleased to offer our germicidal UV lamps which are mounted inside quartz sleeves. These all-quartz lamps are available in a series of our standard models. UV Lamps are very economical components for their use in your water systems applications. Aqua Azul Standard units have 15 millimeter (mm) lamps and 20 mm diameter sleeves.

Quartz sleeves are of tremendous benefit in that they provide protection for lamps without sacrificing efficiency. Sleeves protect against such common problems as breakage, leakage, temperature fluctuations, and environmental hazards.

Our UV Lamps are designed for single ended use in a variety of modes including instant start and rapid start. Standard units employ a four-pin ceramic base with a connector.

A standard quartz lamp maintains 65% of its UVC output at 9,000 hours, however with Aqua Azul's UVC lamps, we are able to maintain up to 90% of their output at 13,000 hours, which means fewer lamp replacements and improved end of life performance. All of this adds up to a more economical and UVC efficient design to maintain required disinfection levels.

CALL NOW AND SEE HOW AQUA AZUL CAN ASSIST YOU IN ORDERING YOUR SPARE AND REPLACEMENT PARTS SUCH AS UV LAMPS, QUARTZ SLEEVES, O-RINGS EXT. AS WELL AS WITH YOUR NEXT WATER OR WASTEWATER, PROJECT.
